Allowable Subject Matter

1. Claim 1-6, 10-15 allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art teaches a image pickup apparatus with photometric device that receives light passing through the taking lens and output luminance information and also teaches the device with a control section which acquires information on characteristics of the taking lens and sets a exposure time according to the information on characteristics of the taking lens and luminance information from the photometric device. However, the prior art fails to teach the control circuit sets a first exposure compensation value according to the information from the photometer and lens information to carry out a first storage of light passing through the lens and sets a second exposure compensation value according to the result of the first storage to carry out a second storage.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Takagi (US 5655161) teaches a photometric device where the CPU calculates the optimum exposure value based upon information the photometric device and lens data from the ROM in the lens barrel.

Iwasaki (US 6560412) teaches an electronic flash controlling device which calculates correct exposure value for ambient light exposure based on photometering values from the light metering unit and lens information.

Hoshuyama et al. (US 6906744) teaches an electronic camera with a CPU that calculates an exposure value based upon the brightness data and the aperture value of the zoom lens from lens information input unit.

Sato (US 6839087) teaches an exposure controller of a digital camera.
